

JUSTIN CHRISTOPHER

Jakarta, Indonesia | justinchristopher@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Computer Science student at BINUS University with hands-on experience building deployed projects across AI, business workflow automation, and business intelligence. Built solutions using Python, SQL, FastAPI, PostgreSQL, Power BI, and React, with a focus on requirements, data-driven analysis, and reliable system implementation.

EDUCATION

Bina Nusantara University (BINUS University) - Bachelor of Computer Science, Expected 2028

GPA: 3.27 / 4.00

Relevant Coursework: Artificial Intelligence, Deep Learning, Database Systems, Business Software Design, Venture Creation, Scientific Computing

SELECTED PROJECTS

HelpDesk AI - Evidence-First IT Knowledge Assistant | *Python, FastAPI, PostgreSQL, pgvector, FastEmbed, React, Vercel, Neon*

- Built an evidence-first IT knowledge assistant using FastEmbed semantic retrieval, PostgreSQL/pgvector, deterministic grounded answers, and backend-controlled citations.
- Deployed React + FastAPI as one Vercel serverless app with Neon; verified retrieval, authorization, history/feedback persistence, fallback behavior, and 177 backend tests.
- Implemented evidence thresholds, ambiguity detection, unsupported-query fallback, and backend-controlled citations to keep responses grounded in retrieved IT knowledge.

[Live Demo](#) | [GitHub](#)

RequestFlow - Internal IT & Procurement Request Automation | *FastAPI, React, TypeScript, PostgreSQL, SQLAlchemy*

- Designed a role-based IT/procurement workflow spanning Manager and Finance approvals, Procurement processing, SLA monitoring, audit trails, and operational analytics.
- Implemented JWT authentication, RBAC, and object-level authorization; validated critical flows with 116 backend tests and hosted browser regression testing.
- Modeled conditional approval routing for requests >= Rp5M, SLA states, immutable audit events, and concurrency-safe approval decisions.

[Live Demo](#) | [GitHub](#)

NusaMart - E-Commerce Analytics & Business Intelligence | *Python, SQL, PostgreSQL, Power BI*

- Built an end-to-end BI pipeline from raw Olist data through Python cleaning, PostgreSQL star-schema modeling, SQL analysis, and Power BI dashboards.
- Analyzed 89,860 delivered orders and R\$12.34M in revenue; produced KPI, customer, delivery, geographic, RFM, and retention insights with business recommendations.
- Designed a 3-page Power BI dashboard with 36 DAX measures covering KPIs, customer behavior, delivery performance, RFM, and retention analysis.

[Case Study](#) | [Power BI](#) | [GitHub](#)

CvScreener - AI-Assisted CV Screening System | *Python, FastAPI, PostgreSQL, React, TypeScript, AI/NLP*

- Developed an evidence-first CV screening system that extracts structured candidate profiles and matches qualifications against job requirements with traceable evidence.
- Combined AI-assisted profile extraction with deterministic scoring and evidence-backed matching; validated with 1,333 backend tests, 135 frontend tests, and 97% backend coverage.
- Implemented evidence-level outcomes (MATCHED, PARTIAL, NO_EVIDENCE, NEEDS_REVIEW) to make screening decisions traceable and auditable.

SKILLS

Technical: Python, C++, SQL, PostgreSQL, Power BI, FastAPI, Git/GitHub, Data Analysis, Data Modeling, AI/RAG Systems

Business & Analytical: Business Analysis, Requirements Analysis, AS-IS / TO-BE Process Mapping, KPI & SLA Design

Languages: Indonesian - Native; English - Professional Working Proficiency

CERTIFICATIONS

- Cisco Networking Academy - Data Analytics Essentials, 2026
- IBM SkillsBuild - AI Fundamentals: Foundations for Understanding AI, 2026
- Microsoft Elevate AI / GreatNusa - Azure AI Fundamentals Learning Program, 2026
